Contents

emoji2html	2
emoji_picker	2
emo	3

Index	4
--------------	----------

emoji2html	<i>Convert Emoji to HTML</i>
------------	------------------------------

Description

Uses `emo::ji()` to look up emoji, but return the escaped HTML.

Usage

```
emoji2html(x, copy = clipr::clipr_available())
```

Arguments

x	A search term passed to <code>emo::ji()</code> or the result of <code>emo::ji()</code> .
copy	Should the result be copied to the clipboard?

emoji_picker	<i>Emoji Picker</i>
--------------	---------------------

Description

An emoji picker gadget that lets you search and find emoji and insert either the unicode, HTML, or `emo::ji()` versions of the emoji. Built using the **Emoji Button** JavaScript library.

Usage

```
emoji_picker(gadget = TRUE)
```

Arguments

gadget	If TRUE the app is run as a gadget, otherwise it's run as a standalone app.
--------	---

Value

A list with the emoji, the emoji name and the html entity.

`emoji`*The emoji emoji gadget*

Description

Opens a miniUI based Shiny gadget in the RStudio Viewer pane with a searchable table of emoji. Select a row and click the copy desired button.

Usage

```
emoji_gadget(clipout = clipr::clipr_available(), ...)
```

```
emoji_shiny(clipout = clipr::clipr_available(), ...)
```

Arguments

<code>clipout</code>	Should the gadget attempt to write to the clipboard?
<code>...</code>	Ignored at this time

Value

nothing
